

Christmas Dinner

Your pet may find it hard to leave you in peace while you tuck into your Christmas dinner, but don't feel guilt ridden into handing over some of your dinner!

Poultry bones in particular may become lodged in your pet's throat or they may cause a blockage in the intestines leading to emergency surgery.

Fatty foods can cause dogs to have digestion problems and may lead to vomiting and diarrhoea.

Even simple foods such as raisins and grapes, should not be given to dogs as they can be toxic and can cause kidney failure.
