

Platelet Regenerative Therapy

Core science and practice

Regenerative Medicine is a platelet cell and or stem cell therapy modality. It can be combined with surgical intervention or medically treated individuals and can be used on any age or species of animal.

The one-day course is suitable for referral orthopaedic or soft tissue specialists and general surgical or medical veterinarian surgeons in primary vet care clinics. It can be used in the treatment of osteoarthritis, damaged and poorly vascularised tissues (e.g. tendons, ligaments and cartilage) that usually do not heal or only very slowly, and often with scar tissue formation resulting in chronic pain and reduced range of motion.

During this one-day course, you will update your knowledge in the following:

- The use of regenerative therapies for the treatment of tendon, ligament and joint injuries
- The science behind the use of cell therapy in small animals
- When to consider using Platelet Rich Plasma and other regenerative modalities therapy in your patients
- The use of V-PET including blood sampling, filtration, removal of platelet/white blood cell factor concentrates and patient administration
- Practical Session on how to administer Platelet Rich Plasma therapy into a range of different joints and soft tissue structures

Speakers

Ian Macqueen | Russell Chandler
Stephen Barabas

Course dates

5 March 2020 - Alexandra House, Swindon
1 October 2020 - Benchmark House, Sheffield

This course will provide six hours of Continuing Professional Development.

Medical Therapeutic Lasers

For everyday clinical practice

Class IV therapeutic lasers offer a wide variety of therapeutic applications to everyday clinical practice. This one-day course combines state-of-the-art seminars as well as hands-on practical instruction and will enhance your knowledge in a new era of medical science.

This course is for educating vets, vet nurses and practice managers about a new era of medical science – Class IV Medical Therapeutic Laser Therapy for enhanced rehabilitation of post-surgical joints and tendons, or medically managed musculoskeletal problems and osteoarthritic joints.

By the end of this one-day course, you will be able to:

- Understand the science behind laser therapy
- Appreciate the wide range of applications for the use of therapeutic lasers
- Identify the best way to introduce laser therapy into your practice
- Use the laser confidently in the most effective way

It would be appreciated if you would consider bringing a dog with you for the practical demonstration component of the course. A £25 Marks and Spencers voucher will be available as a 'Thank You' for your assistance.
